

Treatment of industrial effluents

Concentrate for better treatment

Evaporation, crystallisation, stripping, membrane treatment

For more than 20 years, France Evaporation has been developing and building efficient, economical and environmentally friendly industrial effluent treatment facilities.

PERFORMANCE

Up to 99% reduction in effluent volumes

ENERGY SAVING AND EFFICIENCY

From 2.50€/m³ treated

WATER RECYCLING / ZERO LIQUID DISCHARGE

- Evaporation
- Crystallisation

TESTING AND ANALYSIS

Validation of performance, products and co-products

MOBILE UNITS

Available under 5 working days, for temporary or emergency treatments

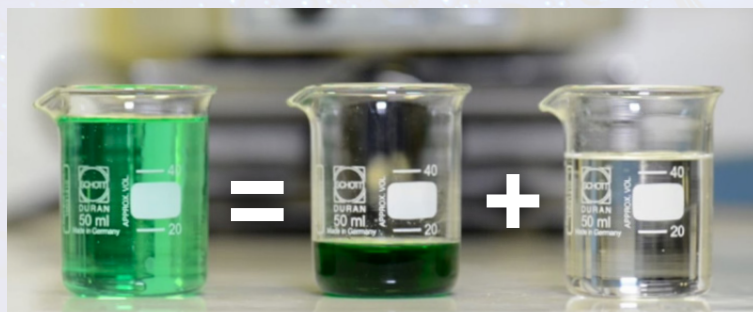

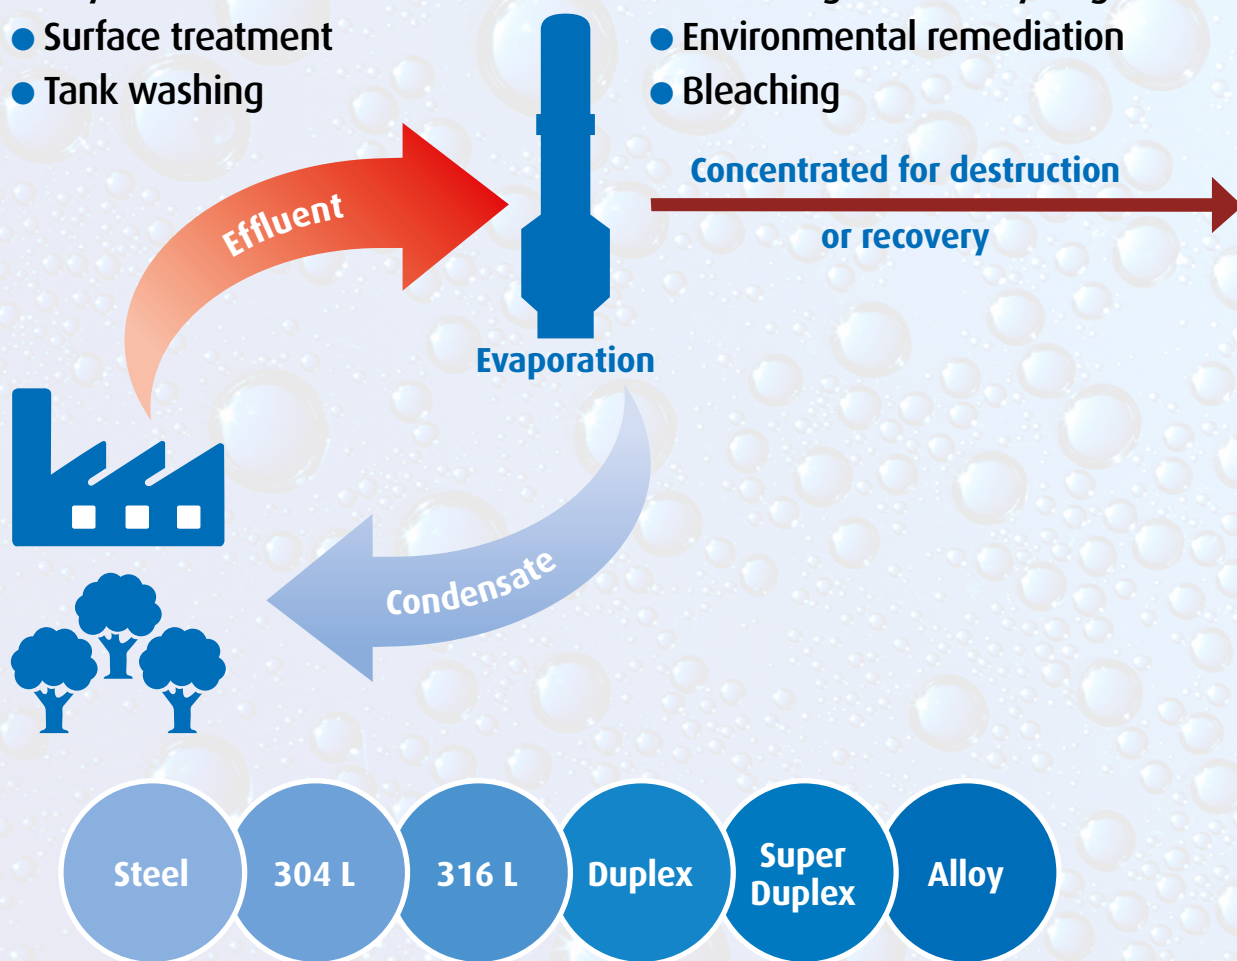

RESPECTS THE ENVIRONMENT

- Reduction in water consumption (recycling)
- Effluent to suit the natural environment

Control your effluent in compliance with standards

France Evaporation installations are customized and fit-for-purpose to address a large range of specific industrial issues:

- Rinsing water
- Oily emulsions
- Surface treatment
- Tank washing
- Eco-industrial park (ZLD)
- Active ingredient recycling
- Environmental remediation
- Bleaching

Evaporation allows for an extreme concentration of effluents and the production of condensates, which can be recycled or discharged into the natural environment.

Your benefits

- Reduction in the volume to be destroyed or active ingredient recycling
- Installation designed to suit your needs and constraints
- Turnkey systems delivered
- Design, installation, commissioning and training by our teams of specialised engineers
- Maintenance and operational monitoring
